KEYFOB
INSTRUCTIONS
ADDING A KEYFOB

STEP 1

Push and hold the white operating button on the wall box for 5 seconds until the red LED goes out

STEP 2

Take the new Keyfob to be added and press the designated button once.
Repeat for all keyfobs needing coding

STEP 3

The red LED indicator on the wall box will flash with each registered keyfob

STEP 4

Once added;
Wait one minute for the red LED indicator switches back to its normal state.

The door is now ready for normal use.

INSTRUCTIONS

REMOVING A KEYFOB

NOTICE

It is **NOT** possible to selectively delete access controllers. The only way to decode a keyfob is to completely remove coding for **ALL** linked fobs.

STEP 1

Switch off the power supply to the unit and remove the front cover *via* the two fixing screws beneath the dark-grey bottom cover.

STEP 2

Switch up the dip switch furthest to the right *(Marked either 5 or 6)* and then return power to the unit.

ON APEMs
1 2 3 4 5 6

STEP 3

Check that the yellow radio set LED illuminates for 5 seconds. All transmitters are now deleted, switch the dip switch back down and restart the power supply.
